

PAVEMENT PRESERVATION CHECKLIST SERIES

This continuing series of durable, pocket-size checklists details the steps involved in each of several preventive maintenance processes (for example, chip seal application, thin hot-mix asphalt overlay, etc.). Convenient references for maintenance personnel and inspectors, the hands-on booklets spell out the requirements for document review, equipment inspections, weather conditions, surface preparation, application, traffic control, and more for each maintenance strategy.

To obtain a supply of the printed checklists, contact your local Federal Highway Administration division office or Tom Deddens, Office of Asset Management (tom.deddens@fhwa.dot.gov). You can view and print copies of the checklists [here](#).

1/ Crack Seal Application

2/ Chip Seal Application

3/ Thin Hot-Mix Asphalt Overlay

4/ Fog Seal Application

5/ Microsurfacing Application

6/ Joint Sealing Portland Cement Concrete Pavements
